Technical Skills

Programming Languages: JavaScript, TypeScript, C#

Databases: MySQL, MongoDB

Backend: Node.js, Express.js, Sequelize, ADO.NET

Frontend: React.js, React Native, Redux

Experience Freelance

Rental Cars Mobile Application | Freelance Developer

Feb 2025 - Feb 2026

- Designed a MySQL database schema and built secure backend APIs using Node.js, Express.js, and Sequelize, implementing authentication, authorization, structured error handling, and logging.
- Integrated third-party services including payment processing (Braintree), file storage (Cloudinary), Google Maps API, and an aggregator API for vehicle data and booking operations.
- Developed frontend screens and reusable components in React.js (admin dashboard) and React Native + Expo (mobile app) for managing bookings, rental periods, payment workflows, vehicle information, and license verification.
- Deployed the backend and database to a VPS, collaborated with a small development team, participated in client meetings, and iterated based on feedback to improve system functionality and user experience.

Open source

Twenty CRM (Open Source Contribution)

June 2025 - Sep 2025

github.com/twentyhq/twenty

- Merged 16 pull requests into a large open-source CRM (React + NestJS), contributing bug fixes and full-stack features across a production codebase, collaborating with maintainers through structured code review and feedback cycles.

Projects

Driving License Management

Sep - Oct 2024

github.com/omarNaifer12/Driving-License-Management

- Built a full driving license management system, including appointment scheduling, mandatory testing phases, local and international license issuance, renewals, replacements, and detained license management.
- Implemented a layered (3-tier) architecture consisting of Presentation, Business Logic, and Data Access layers.
- Developed RESTful APIs in C# and built reusable React.js components using Redux for state management.
- Technologies: C#, SQL, ADO.NET, React.js, Redux

Khademni | Developer (Bootcamp Team Project)

Jul - Aug 2024

github.com/zah80/thesis-project

- Built job posting, service request, and laborer rating features for a mobile application connecting users and laborers.
- Developed laborer profiles with job search functionality, appointment management, and real-time notifications to improve job discovery.
- Implemented JWT-based authentication and real-time messaging for communication between users and laborers.
- Technologies: React Native, Express.js, MySQL, Socket.IO, JWT

Certifications

Bootcamp Rebootkamp | Full-Stack JavaScript

Feb 2024 - Aug 2024

Languages

Arabic | English
