github.com/omarNaifer12 | leetcode.com/u/onaifer7

Motivated full-stack developer with 1+ year freelance experience, passionate learner and open source contributor seeking new job opportunities.

Technical Skills

Programming Languages: JavaScript, Typescript, C#

Databases: MySQL, MongoDB

Backend: Node.js, Express.js, JWT, Socket.IO, Sequelize, ADO.NET

Frontend: React.js, React Native, Redux

Experience Freelance

Rental Cars Mobile Application | Freelance Developer

Feb 2025 - Feb 2026

- Designed the database schema using MySQL and built secure backend APIs using Node.js, Express, and Sequelize, implementing authentication, authorization, structured error handling, and logging.
- Integrated third-party services including payment processing (Braintree), file storage (Cloudinary), Google Maps API, and Aggregator API for vehicle data and booking operations.
- Implemented frontend screens and reusable components in React.js (admin dashboard) and React Native + Expo (mobile app) for managing bookings, rental periods, payment workflows, vehicle information, and license verification.
- Deployed the backend and database to a VPS. and collaborated with a small team of developers, participated in client meetings, and iterated based on feedback to improve system functionality and user experience.

Open source

Contributions to [Twenty CRM](#)

June 2025 - Sep 2025

<https://github.com/twentyhq/twenty>

- Merged 16 pull requests into a production-scale open-source CRM (React + NestJS), including bug fixes and full-stack features across a large codebase, collaborating with maintainers through their PR review process.

Projects

Driving License Management

Sep- Nov 2024

<https://github.com/omarNaifer12/Driving-License-Management>

- Converting a desktop application with 3-tier architecture into a web application.
- Developed a complete workflow where people can book appointments, pass three mandatory tests to obtain a local driving license and become drivers, and then apply for an international license.
- Implemented features for renewing licenses, replacing lost or damaged ones, and managing detained licenses, including processing their release.
- Technologies: c#,Sql,Ado.Net,ReactJs,Redux

Khademni | Developer

Jul- Aug 2024

<https://github.com/zah80/thesis-project>

- Developed a platform connecting users and laborers, implementing a rating system for users to evaluate laborers and job posting functionality for users to request services.
- Created laborer profiles that allow them to search for jobs, receive real time notifications about job opportunities, and manage appointments directly from their accounts.
- Integrated a real-time messaging feature for seamless communication between users and laborers, Collaborated effectively with a development team, ensuring successful project delivery and functionality.
- Technologies: React Native, Express.js, MySQL, Socket.IO, JWT
